

# Quick Start Guide

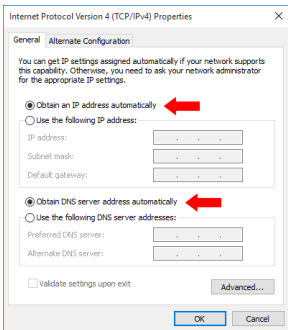

Model: SLG410

Version: 1.0

# Configuring the SLG410 gateway

1. Connect the power cable to the gateway.
2. Connect PC with gateway LAN port by network cable and WAN port with the router, respectively. Both the LAN and WAN LED will blink on the gateway.
3. Configure your PC to **Obtain an IP address automatically** in TCP/IPv4 setting.

4. Input the default gateway IP address **192.168.82.1** in the web browser to enter the gateway login page. (Default login password is **admin**)

5. After login, the following page shows up:

The screenshot displays the 'Router Status' page. On the left is a dark sidebar with navigation options: Router Status, WAN Setting, LAN Setting, 2.4G Wireless, Terminal Control, Port Mapping, and Administrator. The main content area is titled 'Connection status' and features a diagram showing a 'Desktop' connected to a 'Router', which is connected to a 'Network'. Below this, the status is 'Connected'. The 'Connected devices' section shows 1 device connected, with a download speed of 0.77 KB/S and an upload speed of 0.07 KB/S. The 'System information' section lists: WAN Type: Static IP, Operating time: 53s, SSID: WFI-5734, WAN MAC: 6035CE965735, LAN IP: 192.168.82.1, Firmware version: 3.6.3.64186d, WAN IP: 192.168.132.250, Netmask: 255.255.255.0, Gateway: 192.168.132.1, and DNS 1: 192.168.137.1.

6. Select the **WAN Setting** option to configure a network IP to provide a network to gateway, then follow the step as below:

- (1) Choose the "Static IP" option in WAN Type, then fill out the appropriate **IP address** which is able to access internet. And lick "Netmask" and "Gateway bar", they will fill out automatically, if no, please fill out manually. (e.g. 192.168.132.250).

The screenshot shows the 'WAN Setting' page. The 'WAN Setting' option in the sidebar is highlighted with a red box. The 'WAN Type' section has radio buttons for 'Static IP' (selected), 'PPPoE', 'DHCP', and 'Wireless'. Below this, a note says: 'Please input IP, subnet mask and other information your operator provided. If forgotten, you can call the operator to find them back.' There are three input fields: 'IP address' with the value 192.168.132.250, 'Netmask' with the value 255.255.255.0, and 'Gateway' with the value 192.168.132.1. A blue 'Advanced' link is to the right of the Gateway field. At the bottom is a blue 'OK' button.

- (2) Click **OK** to save. After a successful connection, the gateway configures automatically, and the **Router Status** page changes as shown below.

The screenshot shows the Router Status page with a dark sidebar on the left containing navigation options: Router Status, WAN Setting, LAN Setting, 2.4G Wireless, Terminal Control, Port Mapping, and Administrator. The main content area is divided into three sections:

- Connection status:** A diagram showing a Device connected to a Router, which is connected to a Network. The status is "Connected".
- Connected devices:** Shows 1 connected device, a download speed of 0.78 KB/S, and an upload speed of 0.39 KB/S.
- System information:** A table of system details:

WAN Type	Static IP	WAN IP	192.168.132.250
Operating time	13m 35s	Netmask	255.255.255.0
SSID	WiFi-5734	Gateway	192.168.132.1
WAN MAC	80:95:CE:96:57:35	DNS 1	192.168.137.1
LAN IP	192.168.0.1	DNS 2	...
Firmware version	3.6.3.06186d		

7. Select **Administrator** option, to configure Remote IP and server port.

(1) The **IP** is the local IP address of client's PC in which the **ZKBioHLMS** software is installed. The server port is **18088** by default.

- (2) Click **OK** to save and it will remind success.

The screenshot shows the Administrator configuration page with the same sidebar as the previous screenshot. The main content area is divided into two sections:

- Password:** A form with three input fields: "Old" (Please input old password), "New" (Please input new password), and "Confirm" (Please confirm new password). Below the fields is a blue "OK" button.
- Remote:** A form with two input fields: "IP" (172.16.12.22) and "PORT" (18088). Below the fields is a blue "OK" button.

8. Login to the **ZKBioHLMS** to add the gateway to the platform.
  - (1) Click **Hotel->Device Mgnt->Device->Search**.
  - (2) Click **Search** button to search the gateway and add the configured one.
  - (3) Edit the **Gateway Name** and click **OK**. Then click Refresh, the gateway will appear on the page.
